

# Delivery Management Services

## Unleash Your Project Delivery Potential with myP3

### WHAT IS DELIVERY MANAGEMENT?

myP3's Delivery Management Services provide complete end-to-end delivery of your program or project, or just a specific lifecycle delivery stage if required.

We also provide intervention 'recovery' for those of your initiatives that have deviated past acceptable thresholds and to get your project or program back on track.

### VALUE

Our experienced resources bring knowledge, skills and industry best practices to ensure your project or program is managed effectively. We take charge of delivery to empower you to achieve predictability and results.

You can access our project and program management expertise when required, scaling to changing demand or to allow your operations / delivery specialists to focus on their core competencies rather than multi-task across management responsibilities as well as their own roles.

This service can be implemented using either a consumption model or fixed-work packaging for your specific project stages of Initiation, Definition or Execution, or full end-to-end delivery.

### SERVICES

We specialise in planning, execution, and orderly completion of initiatives encompassing various technology infrastructure and business application solutions.

Agile, traditional (waterfall) and hybrid delivery approaches are supported and bolstered by robust management practices across the seven key management disciplines. We also leverage client-specific frameworks and methodologies.

Our scope, across any or multiple stages, is fully negotiable – we commit to delivery of agreed outputs to the planned delivery milestones and at the price quoted.

#### INITIATION AS A SERVICE

A fast-tracked, repeatable approach that delivers outputs with sufficient analysis that fosters decision-makers' confidence to proceed to the Definition Stage. Active Stakeholder engagement supports establishment of clear initiative objectives, outcome maps and benefit profiles.

A preliminary schedule is drafted including high-level deliverables, costs, and resources. Options analysis and recommendations may be included as relevant.

#### DEFINITION AS A SERVICE

We manage full exploration for detailed planning including development of a final Plan and Business Case.

A detailed schedule is prepared for baseline creation including all deliverables, costs, and resources in readiness for governance gate approval to proceed to the Execution Stage.

## Unleash Your Project Delivery Potential with myP3

### EXECUTION AS A SERVICE

Delivery of Execution Stage whether agile, waterfall or hybrid delivery is as preferred by our client and / or client's vendor(s).

We employ robust stakeholder engagement, vendor management and rigorous control to keep initiatives on track for time, cost, scope, and quality.

During Execution Stage, we ensure communications are well managed so that all internal, external and project / program teams are working collaboratively, understand interdependencies, progress is reported accurately, and are achieving milestones.

Critically, we ensure risks and issues, escalations and timely governance decisions are actioned.

Detailed planning and execution for transition, change management, implementation and support for the business post-cutover are well defined, approved and conducted during Execution Stage.

After successful transition to operations, support and business areas, we ensure orderly closure through capture of Lessons Learned from key stakeholders, preparation of a Closure Report, confirm that information is documented and archived for future reference.

A Post Implementation review can also be conducted to assess benefit realisation and maximise return on investments.

### PROGRAM AND PROJECT RECOVERY

myP3's Recovery service can occur at any project or program Stage and includes the evaluation of current state of variances against approved project or program baselines and the root cause of breach.

Our first objectives are to ensure control is re-implemented / maintained, and that key stakeholders and teams are well engaged and involved to identify problems that have resulted in poor progress performance, and potential resolutions.

Our assessment will highlight the areas to target for resolution and formulation of fresh strategies which may or may not require governance decision-making prior to recovery intervention.

With approvals in place, myP3 may either continue to manage the initiative through to Closure or temporarily act as caretaker until a project or program manager is re-instated.

### NEXT STEPS

When you need assistance with the delivery your Project, Program or Portfolio contact Ranger, our Delivery Services Manager.
